7. NEXT STEPS

What is DISARM?

An single-use, autonomous, and universal space debris grappling device that uses capacitor discharge stud welding as its method of attachment.

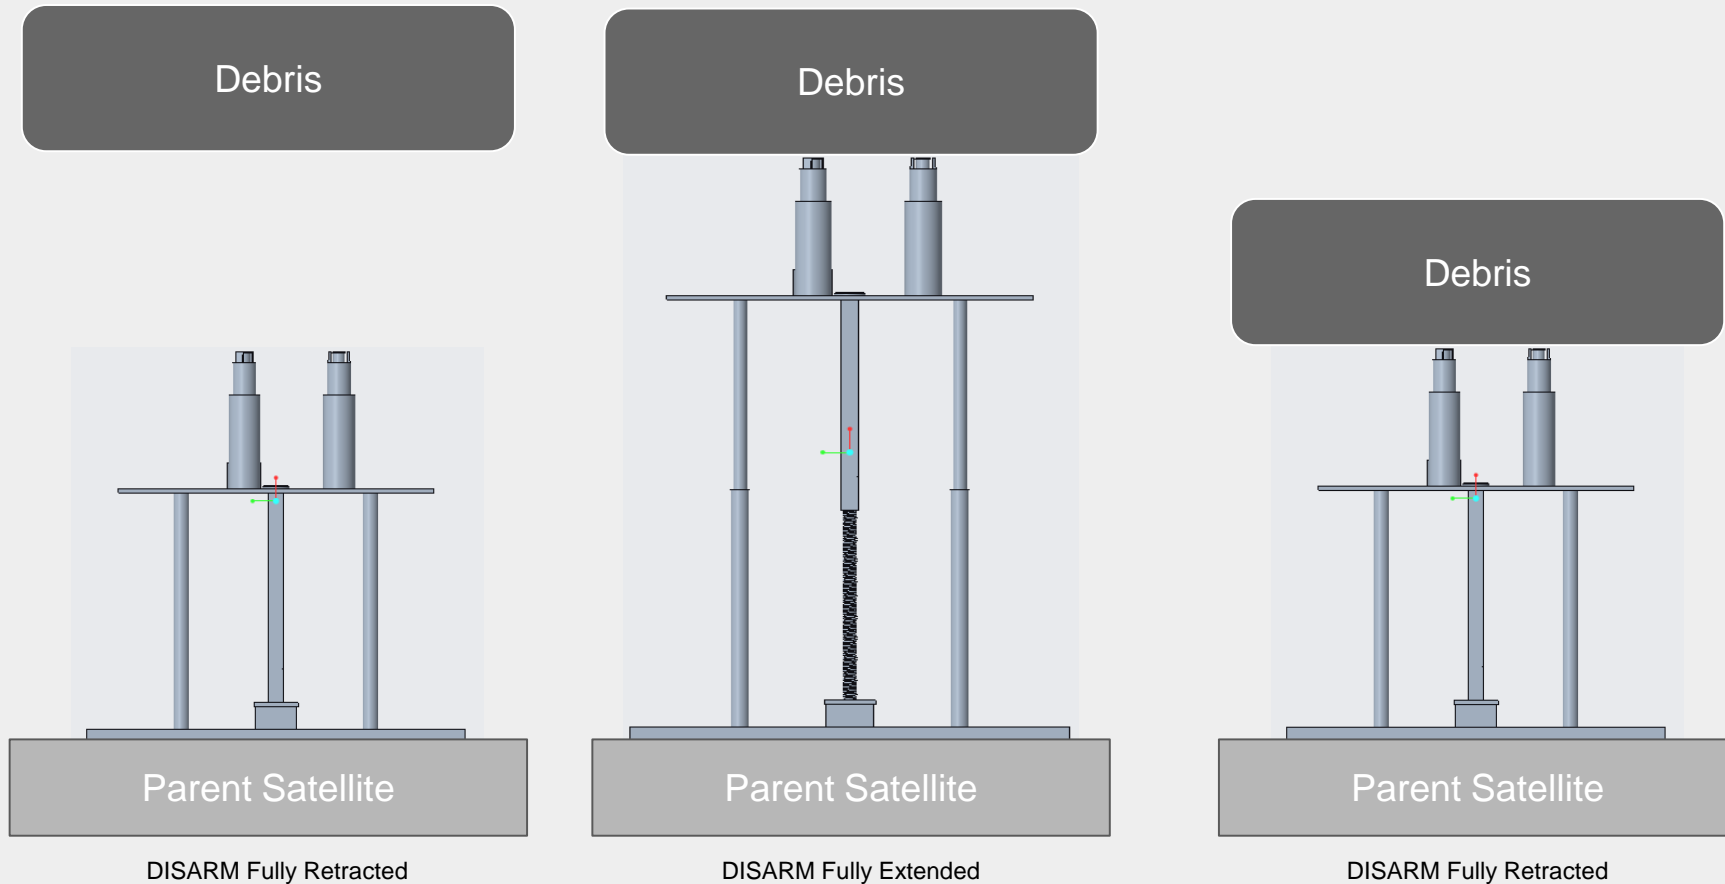

Model of the DISARM design.

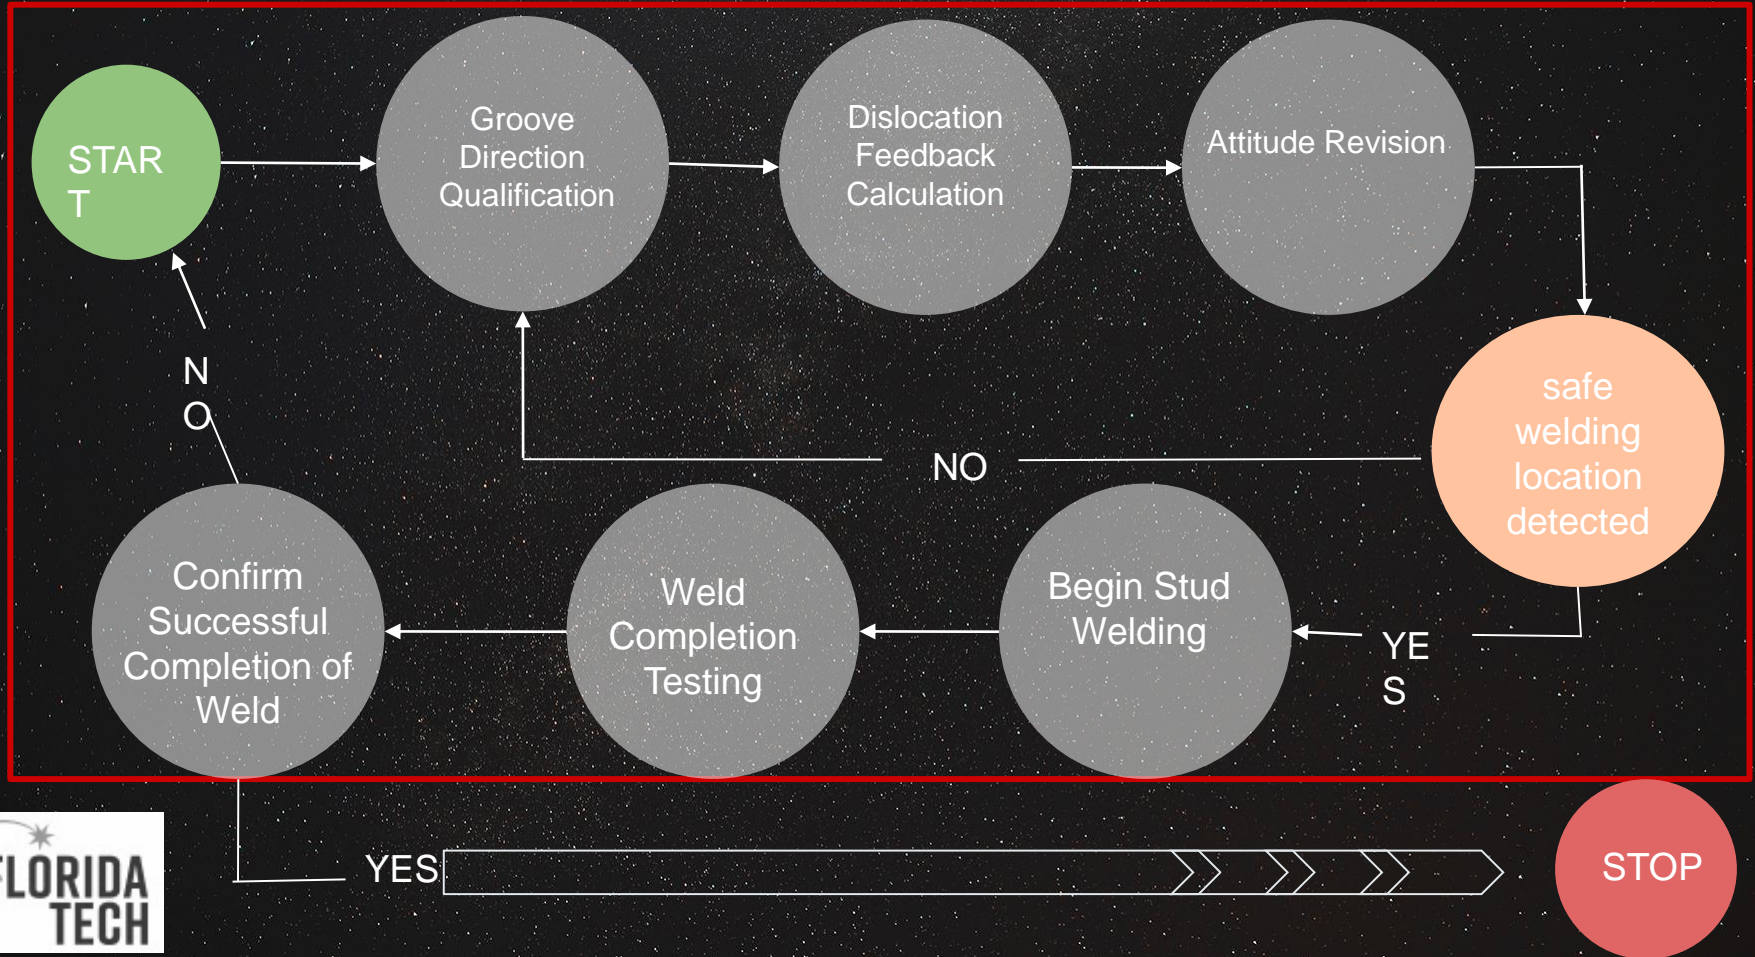

- DISARM is designed to be able to grapple a 27U cubesat sized (54kg) orbital debris
- Our prototype design will prove the feasibility of capacitor discharge stud welding for space debris removal
- Our prototype is not a fully-fledged satellite, but rather an attachment system for a pre-existing one

DISARM Prototype Operation

MISSION CONTROL FLOW

Sensor

Lidar-Lite LED V4

Lidar-Lite LED V4	Properties
Unit Size (H x W x D)	52.2 x 21.2 x 24.0 mm
Weight	14.6 g
Accuracy	$\pm 1\text{cm to } 2\text{m}$, $\pm 2\text{cm to } 4\text{m}$, $\pm 5\text{cm to } 10\text{m}$
Range	5 cm -10 m
Interface	I2C or ANT
Power	4.75-5.25 V
Price	\$59.95

New Test Debris Models

Cubesat Model	1 Unit	6 Unit	27 Unit
Dimensions(cm)	10 x 10 x 10	12 x 24 x 36	34 x 35 x 36
Extrusion Depths(cm)	1.5	2.5	10.5
Extrusion Radius(cm)	0.1	1.0	2.7

        <frameName>hokuyo</frameName>
      </plugin>
    </sensor>
  </gazebo>
</robot>
```

Result Simulation Launch

Next Steps

- Fix sensor range not working properly
- Complete rest of simulation requirements, demonstrating DISARM welding unto test debris before next semester
- Apply simulation code unto real-world devices upon purchase

THANK YOU!
